

17th International Heat Pipe Conference

SUBJECT INDEX

3D modeling, 335	local Nu, 103
3-port CPL, 491	loop heat pipe, 279, 287, 295, 319, 327, 335, 465, 483, 499, 539, 603, 611
advanced reactors, 153	loop heat pipe modeling, 465
air-conditioning, 619	loop thermosyphon, 145
albedo, 531, 563	loop two-phase thermosyphon, 169
ALE method, 221	low power performance, 465
alkali metal heat pipes, 507	low temperature, 237
AlSiC (p), 207	mathematical modelling, 491
aluminum, 129	mechanical properties, 207
ammonia fluid, 393	meniscus, 79
analytical model, 121, 279	metal matrix composite (MMC), 207
arterial heat pipes, 507	methanol, 303
automotive thermal control, 611	microgravity, 425
axial groove heat pipe (AGHP), 571	mini- and micro-channels, 473
axial grooves, 185	modeling, 185, 327
battery, 611	multi loop CLPHP, 401
bayonet, 287	multi steady-state, 361
binary fluid, 441	multiple heat sources, 639
biscuits, 673	nano particles, 145
boiling, 111	nanofluid, 449
boiling and condensation, 433	naphthalene, 137
bubble, 499	network, 177
cabinet cooling, 589	network form, 263
capillarity, 111	Ni-Porous wick, 351
capillary evaporator, 295	non-condensable gas, 199
capillary flow, 245, 385	non-condensable, 129
capillary pumped loop (CPL), 263, 271, 303, 311, 343, 491	non-distillation equipment of sodium, 253
capillary structure, 185	notebook cooling, 597
carbon nanotubes, 111	numerical simulation, 199, 343
centrifuge, 303	numerical study, 689
CHTR, 153	on-orbit experiment, 547
circulation, 193	OpenFoam, 335
closed two-phase thermosyphons, 1	optimization, 335
CLPHPs, 433	orientation, 287
computer cooling, 69, 597	oscillating heat pipe, 417, 425, 547
computing hardware, 457	oscillating meniscus, 87,
condenser, 145, 193	oscillation, 59, 287
contact angle hysteresis, 79	passive cooling, 681
continuous oven, 673	phase change material, 681
convective heat transfer, 433	PHP, 59
corrosion, 129	polymer composite, 145

cryogenics, 465	PolyTetraFluoroEthylene wick
cylinder evaporator, 603	pore network model, 295
cylindrical heat pipe, 121	porous media, 343
delective layer manufacturing, 177	power electronics, 611
design and operation, 1	precise charging, 253
development of heat pipe science and technology, 1	pressure drop , 79
diffuser plate, 531, 563	probability density function, 401
earth shine, 531, 563	pulsating flow, 103
effective thermal conductance, 639	pulsating heat pipe, 87, 319, 361, 369, 377, 409, 441, 449, 473
electrical field, 245	pump of heat action, 193
electronic cooling, 185, 231, 335, 393, 449	railways, 313
electronic package thermal control, 531	Rayleigh-Benard/Marangoni instabilities, 221
end wall, 689	re-entrant groove heat pipe, 237
energy conservation, 69	reheating , 619
entrainment, 95	rotating heat pipe, 221
equipments, 673	satellite, 555
ethane, 465	satellite operation, 539
evaporation, 385	secondary wick, 287
evaporation heat transfer coefficient, 491	selective layer manufacturing, 177
evaporator, 145, 193, 457	sensing element, 655
examples of commercial applications, 1	sharp leading edge, 507
experimental verification, 647	side wall, 689
experimentation, 185	single and double differential mechanisms, 253
filling ratio, 409, 449	slug and plug/annular, 377
fire safety, 655	slug and plug/churn/annular flow, 169
flat evaporator, 327	smart phone, 597
flat heat pipe, 213	sodium heat pipe, 689
flat miniature heat pipes, 185	solar absorber, 689
flat plate collector, 663	solar collector, 581
flat plate heat pipe, 121, 531	solar constant, 531, 563
flexible transport lines, 145	space, 555
FloTHERM™, 213	space application, 547
flow patterns, 169, 377	space fission reactors, 507
flow visualization, 161, 169, 377, 441	spacecraft, 351, 571
fluid fill charge, 287	spacecraft thermal control, 531, 563
folded porous metallic mesh screen, 95	start-up, 483
Fourier series expansion, 121	static friction, 79
fuel cell, 611	Taylor bubble, 59, 385
geo-stationary orbit, 531, 563	Taylor bubble flows, 87, 103
good performance, 253	temperature oscillation, 361
gravity effect, 409, 483	terminal velocity, 79
grooved heat pipes, 507	terrestrial application, 263, 271
heat and mass transfer, 193	thermal conductance, 581
heat conduction, 655	thermal control system (TCS), 571
heat exchanger, 589, 627	thermal control, 351, 531, 547, 555
heat flux sensor, 655	thermal instability, 409

heat input, 441	thermal management of LEDs, 95
heat load distribution, 639	thermal management with heat pipe, 647
heat pipe, 1, 69, 145, 153, 179, 199, 465, 515, 547, 555, 571, 589, 611, 619, 627, 639, 655, 681	thermal modeling/simulation, 647
heat pipe optimization, 563	thermal network, 213
heat pipe wick, 351	thermal performance, 237, 327, 473
heat pump, 627	thermal protection, 515
heat recovery, 199, 627	thermal resistance, 145
heat sink, 681	thermal simulation studies, 563
heat transfer, 647, 663, 393	thermo-optical properties, 563
heat transfer system, 319	thermo-physical properties, 207, 563
high density power chip, 457	thermosyphon, 69, 137, 153, 231, 589, 673
high heat flux, 303, 311	thin heat pipe, 597
high power amplifiers, 563	tilt angle, 237
high power, 303, 311	transient, 581
high power electronics, 531	transient model, 263, 271
high speed imaging, 103	transparent heat pipe, 161
high temperature heat pipe, 253	two phase flow, 343, 433
history of heat pipe conferences, 1	two-phase heat transfer, 161, 231
honeycomb panel, 563	two-phase instabilities, 245
hydration, 129	two-phase loop cooling, 457
hydrophobicity, 417	two-phase loop thermosyphon, 199
hypersonic waverider vehicles, 515	two-phase reservoir, 271
immiscible mixture, 137	two-phase thermosyphon, 581
inclined loop, 581	u-shaped heat pipe heat exchanger, 619
inductive distance sensor, 647	vapor chamber, 213
infrared thermography, 361	vapor temperature measurement, 369
interconnected, 177	visualization, 417, 425
intermittent heat source, 681	waste heat recovery, 603
IR thermography, 103	wetting, 111
LHP operation and modeling, 539	wetting film, 385
LHP, 499	wick, 111
liquid film, 59	wickless heat pipe, 663
	working fluids, 449
